Garlock Sealing Technologies Awarded \$150,000 by NYSEG for Facility Upgrades

Palmyra, NY, December 22, 2007 – As the first major component of the Palmyra Modernization Project at Garlock Sealing Technologies, the recently completed 114,000-square-foot Garlock Klozure building is a state-of-the-art example of energy efficiency. In addition, new production equipment is scheduled to be phased in over the next three years that will improve energy conservation and save energy dollars. A portion of the funding for these initiatives came from a \$150,000 grant provided by New York State Electric and Gas Corporation (NYSEG).

“We have a long history of working hand-in-hand with businesses, business organizations and local economic development agencies to create jobs and ensure that the communities we serve remain competitive,” said Jim Laurito, NYSEG’s president and CEO. “We are pleased to be able to assist Garlock Sealing Technologies.”

The completion of the Garlock Klozure building heralds the many other changes in store for the 100-year-old Garlock industrial campus. Approximately \$35 million will be invested over a five-year period to make Garlock Sealing Technologies a 21st-century manufacturing prototype.

About Garlock

Garlock Sealing Technologies, an EnPro Industries company, designs, manufactures and sells fluid sealing products worldwide. A recognized industry leader, Garlock advances fluid sealing technology by delivering innovative solutions and services for process industries’ most demanding applications. The company has 13 global operations with 1,500 employees and distributes its products in more than 75 countries. For more information on Garlock products and services, visit www.garlock.com.
